

Entities & Responsibilities

GameWorld: Manages game initialisation & admin tasks (e.g game config, game setup, main game loop, player turn.)

Tile: Represents the tiles which the dragons will interact with (stand on)

PlayableEntity: Represents the playable entity a player interacts with

GameBoard: Runs the interactions with the game board by the players (e.g performing movement, flipping chit card)

ChitCard: Represents the chit cards and their effects

EventBus: Handles registration of listeners, and notification of appropriate listeners on event fire

WinEventXxxx: Publisher and listeners for win event

MoveActionXxxx.: Publisher and listeners for a move action (for characters) that is fired

DrawableByAsset: Indicates that the object is drawable by pygame using assets

DrawAssetInstruction: A data class for organising data required for drawing an asset

ModularClickableSprite: Allows classes to be represented as a sprite that is clickable on a screen.

Patterns Used

Observer: WinEventPublisher, WinEventListener
• Why?: Don't have to check all starting tiles to see if win occurred. Allows for wins from other sources

Singleton: EventBus
• Why?: Should be one central event bus managing all events

Todo

Cardinalities

Notes

Upcasts are safe
Circular dependencies = too many responsibilities
